

Saddle Bag Installation Instructions

Use a pad with your saddle and place the Saddle Bag behind your saddle but on top of the pad to prevent any rubbing. Our saddle bags do have padding on the underside, however, they could slip and we want to ensure your horse is kept comfortable.

Try to pack with equal weight on each side of the bags. Drink alternately from the water bottle to keep some balance to the weight.

We suggest that if you ride with a cell phone, that you set it to vibrate, and carry it on your person and not in the saddle bags. Should it ring and scare your horse you could be left behind with no way to call for help.

Ride Safe: Ride with a friend.

A Loop Strap A around a billet that you buckle to your girth. If you use billet # 3 with your girth, as shown, then the saddle bag strap loops around # 3.

If you use billets 1 and 2 with your girth, then loop the saddle bag strap around # 2.

B If your saddle bag has a second strap at the bottom, feed your girth through the loop and then buckle as shown.
